

An epoch-making drainage duct molded in unique corrugated form.

Thermoplastic Composite Drainage Pipe (One-touch Fitting)

Features

- A joint of unique structure ensures excellent water-tightness.
- Provided with a metal reinforcement support designed to demonstrate astonishingly high durability against external pressure.
- A lightweight product with good workability.

Overview

(Technical principles, actions, etc.)

KANAHUME A is an epoch-making drainage duct made of a resin-metal compound complex molded in unique corrugated form. This product incorporates resin and metal performance characteristics, thus demonstrates excellent corrosion resistance and abrasion resistance. Furthermore, KANAHUME A is lightweight. KANAHUME A ducts can be connected together in a moment. This easy-to-install watertight duct has excellent features that make it possible to reduce the size of required installation equipment used in combination, minimize the cost of transportation, shorten the required period of installation work, and save CO₂ emissions, thus contributing to the protection of the global environment.

Applicable field
Temporary drainage at construction work sites and permanent drainage for facilities
