

Emission measurement for contribution to the development of environment-friendly automobiles.

Motor Exhaust Gas Analyzer

Features

- Standard system with the world's top share.
- A lineup of products ranging from direct meters for engine tests to low-density meters for authentication tests.
- Continuously measures the major substances in emissions (e.g., CO, CO₂, THC, NO_x, and O₂).

Overview

(Technical principles, actions, etc.)

The MEXA-7000 Version 3, which has the world's overwhelming share, is an Motor Exhaust Gas Analyzer indispensable to the development of engines. The system includes a lineup of products ranging from direct meters for engine evaluation tests to low-density meters for the latest authentication tests to measure the major substances in emissions (e.g., CO, CO₂, THC, NO_x, and O₂) in emissions continuously. The MEXA-7000 Version 3 supports the development of next-generation engines, thus contributing to the solution of environmental problems and energy problems.
